

IT'S WHAT'S UNDERNEATH THAT COUNTS.

Where wastewater needs to be pumped in residential areas, many public works departments have selected below ground sewage lift stations. With a tiny above ground footprint, the aesthetics of the neighborhood can be preserved.

With a below ground installation, your municipality can select a duplex Trash Flow arrangement with a piggy back pump configuration. Pumps are available in 3"-10" connections and your choice of motors, controls and more.

Wastecorp designs and manufactures Trash Flow lift station in our factory and ships to your job site ready to be lowered into place. Select the pre-engineered lift station solution from Wastecorp's Trash Flow brand. Have your consulting engineering firm contact Wastecorp Pumps today for assistance in developing your specification.
