

Submersible Aerator Type ABS XTA and XTAK

The submersible aerators type ABS XTA / XTAK are suitable for all gas-liquid reactions at temperatures below 40 °C and pressures below 2 bar absolute.

50 Hz

Applications in sewage and water treatment

Mixing and equalizing basins: Equalizing of wastewater pollution load and wastewater quantities, as well as avoidance of odour problems.

Activated sludge basins and SBR reactors: Biological degradation of organic substances.

Sludge stabilisation: Avoidance of odour problems as well as further oxidation of the organic substances.

Flotation: Flotation of oil and grease.

Lagoon aeration: Improvement of natural aeration.

Neutralization: Neutralization of alkaline wastewater with CO₂ or flue gas.

Special applications: Aeration with pure oxygen or ozone.

The submersible aerator is positioned on the bottom of the basin without anchorage. For maintenance and inspection work the aerator can be lifted by means of a mobile crane.

Construction

- Easy and quick installation without emptying the tank.
- No aerosol effect and no sedimentation on the bottom of the basin.
- Good oxygen transfer (SOTR) and aeration efficiency values (SAE).
- Self-cleaning system.
- Replaceable wear parts.

Oxygen transfer, self-aspirating

Under standard conditions (20 °C, 1013 mbar), optimal positioning.

Power consumption, self-aspirating

Technical data 400V, 50 Hz

* P₁ = Power taken from mains. P₂ = Power at motor shaft.

Materials

Motor housing	Cast iron EN-GJL-250 (GG-25)
Motor shaft	Stainless steel 1.4021 (AISI 420)
Fasteners (in contact with medium)	Stainless steel 1.4401 (AISI 316)
Aerator parts (XTA 152 - XTA 2400)	Stainless steel 1.4301 (AISI 304)
Bushing	Bronze

Options: exposed aerator parts hard chrome plated. Special materials on request.

Operation principle

The submersible aerator type ABS XTA / XTAK is a submerged motor, blower, pump and mixer, all combined in one unit. It consists of a starshaped impeller directly connected to the motor shaft, a stator surrounding the impeller as well as an air pipe to atmosphere. The impeller rotates inside the stator creating a vacuum and automatically aspirating air through the air pipe. At the same time, water flows into the impeller, is thoroughly mixed with the air and radially discharged through the channels of the stator. This system ensures fine bubbles.

XTAK = extended channels increase SOTR and SAE values up to 15 - 20 %.

Dimensions (mm)

Aerator	Ø C	D	E1	Ø E2	F	G	H
