

NEMA PREMIUM EFFICIENCY

T-Frame Motors

Three-Phase, TEFC Enclosures

2022 Catalog

version 2.0

RELIABILITY MATTERS

Aurora Motors a leading global supplier of NEMA premium vertical pump motors and T-frame motors for OEMs and electric motor distributors. Our inverter-duty motors are precision manufactured to provide superior reliability and durability, with the lowest vibration levels in the industry. Our engineers and designers are among the most respected and recognized in the world. We work at the leading edge of technology, combining our product research and development with deep application knowledge and a comprehensive understanding of market demands.

Wide Range of Inverter-Duty Motors and Accessories

Our commitment to continual innovation and growth is reflected in our motor lines. With T-frame models ranging from 1 hp to 300 hp, and vertical models ranging from 7.5 hp to 1,000 hp, Aurora motors are engineered to reliably serve a wide range of applications.

Put Your Trust in a Better Built Motor

Demand quality construction, lower total cost of ownership, and optimum efficiency from the motors that drive your business. Aurora's inverter-duty motors deliver the performance you expect with the reliability you need. You can rely on our motors to operate flawlessly with a minimum of disruption and maintenance.

NEMA Premium Designation

We offer DOE Certified Premium Efficiency motors featuring optimized systems efficiency, reduced electrical power consumption and costs, and improved reliability as established by the National Electrical Manufacturers Association.

UL Certified

Aurora vertical hollow shaft motors are listed by Underwriters Laboratories (UL). Our products have been evaluated by UL and meet their energy efficiency and safety standards.

Canadian Standards Association

Aurora T-frame motors are certified for use in both Canada and the US according to applicable Canadian and US standards.

ISO 9001 Certification

Aurora Motor's quality management principles meet ISO 9001 standards. These principles include a strong customer focus, the motivation of our top management, our process approach, and our dedication to continual improvement.

EASA Member

Aurora Motors is an associate member of the Electrical Apparatus Service Association, Inc. (EASA), an international trade organization of nearly 1,800 electromechanical sales and service firms.

NEMA PREMIUM EFFICIENCY T-FRAME MOTORS

Latest technologies, highest quality

Available from 1hp to 300 hp, Aurora NEMA Premium Efficiency T-Frame Motors are three-phase induction, TEFC (Totally Enclosed Fan Cooled) squirrel-cage motors manufactured with quality materials and the latest technologies. Our stator core is manufactured with high-quality laminated electrical steel. The high permeability and low loss of the steel enables Aurora T-Frame Motors to operate more efficiently.

Wide range of applications

The low-noise, low-vibration design of Aurora T-Frame Motors features advanced cooling capabilities and makes them perfect for a variety of applications including compressors, ventilators, and pumps for petrochemical, medical, and mining environments.

Features:

- Frame sizes: 143T – 449T
- Class “F” insulation (Class H available)
- Ambient temperature: 40°C max
- VPI treatment
- Dynamically balanced rotor
- Low noise, low vibration bearing
- Steel or cast iron fan cover
- Laminated steel stator core
- Continuous Duty (S1)
- Rated frequency: 60Hz (50Hz available)
- Service factor: 1.15 or 1.0

Type designation:

Horsepower	1hp – 300hp
Design Voltages	208-230/460V (380V available) / 60Hz (50Hz available)
Efficiency Level	NEMA Premium Efficiency

CONSTRUCTION

Manufactured with high-quality materials

Aurora T-Frame Motor stator windings use Class F insulation with polyimide enamel round wire and VPI treatment to provide strong mechanical support, superior electrical insulation, moisture and contamination resistance, and uniform heat dissipation. The conduit box is made of cast iron with Standard NPT threads in the opening.

Stator

- Laminated with high-permeability, low-loss electrical steel to boost efficiency
- Class F insulation windings (Class H available)
- Polyimide enamel round wire
- VPI treatment
- Embedded thermistors

Bearing and lubrication

- Low-noise, low-vibration bearings
- Frame 210: bilaterally shielded ball bearings without replenishing grease
- Frame 250 and larger: open bearings with attachments to drain and replenish lubricating grease without stopping motor
- No. 3 lithium base grease
- Bearing design life is as least 40,000 hours at rated load

447T - 449T	2P: 6314 / 4,6P: NU319	2P: 6314 / 4,6P: 6318

Rotor

- Squirrel-cage type
- Cast aluminum alloy
- Dynamically balanced to reduce vibration

Conduit box

- Located on central side
- F1/F2 convertible
- Cast iron housing
- Grounding bolts and connection diagram inside
- Terminal blocks are available

Fan and fan cover

- Fan available in plastic or cast iron
- Fan cover available in sheet metal or cast iron

Sunshade

- Recommended when motor to be installed in direct sunlight with an ambient temperature above 40° C

NEMA Premium Efficiency T-Frame Motors

WARRANTY POLICY

Aurora Motors warrants its motor/product against defects in material and workmanship provided the motor/product has properly been cared for, installed, and operated in the application for which the motor/product was designed. Aurora Motors warrants its motor/product for 18 months from the date of shipment from the manufacturer, or 12 months from the installation date, whichever expires first. This warranty shall be in lieu of any other warranty expressed or implied including but limited to, any implied warranty of merchantability, or fitness for a particular purpose. A defective motor/product must be taken to an independent repair facility authorized by Aurora Motors for inspection or returned to Aurora Motors for completion of warranty. Any and all repairs must have a written authorization by Aurora Motors prior to such repair.

To claim a warranty on a motor/product, the purchaser must provide the original invoice, date of installation, authorized inspection report, cost of repair (authorized repair facility) and photographs/video of failure which support the warranty claim. Aurora Motors will be responsible for repairs or replacing the defective motor/product provided that the motor/product has an Aurora Motors nameplate on it and in fact is an Aurora Motors product, has never being altered, is returned, and freight pre-paid. Before returning the motor/product, a return merchandise authorized number (R.M.A.) must be obtained. Aurora Motors will pay the transportation charge one way only, from the warehouse to the customer. Aurora Motors is not responsible for any expenses in connection with any repair made by anyone other than the factory or an authorized service facility. Aurora Motors is not responsible for removal, installation, or other incidental expenses incurred in shipping the motor/product to or from facilities. The utilization of the thermistors and space heaters are required for warranty inspection.

Aurora Motors assumes no responsibility for consequential or incidental damages, including but not limited to, personal injury or labor costs arising from an operating failure of the motor/product for any reason whatsoever, nor does it assume responsibility for improper storage and handling by the distributor and/or end-user. Also, for warranty purposes, customer must be ready to provide relevant data to Aurora Motors such as the end-user and installer contact information, (preferably at the time of installation). Before a warranty can be determined, the warranty department needs documentation of what application the motor/product was being utilized for, date the motor/product was purchased, the date the motor/product was installed and if all wiring was properly connected, if both the thermistor and space heater had been installed correctly, if the motor/product had been properly filled with oil, and a complete description of the cause of failure.
